

Harnessing the power of data to drive recovery and transform the NHS

Better Insights. Better Decisions.
Better Health.

COVID-19: a catalyst for change

“In the middle of every difficulty lies an opportunity”

Albert Einstein

A shared version of the truth

Divert: Patients/service users to the facilities that are best able to care for them.

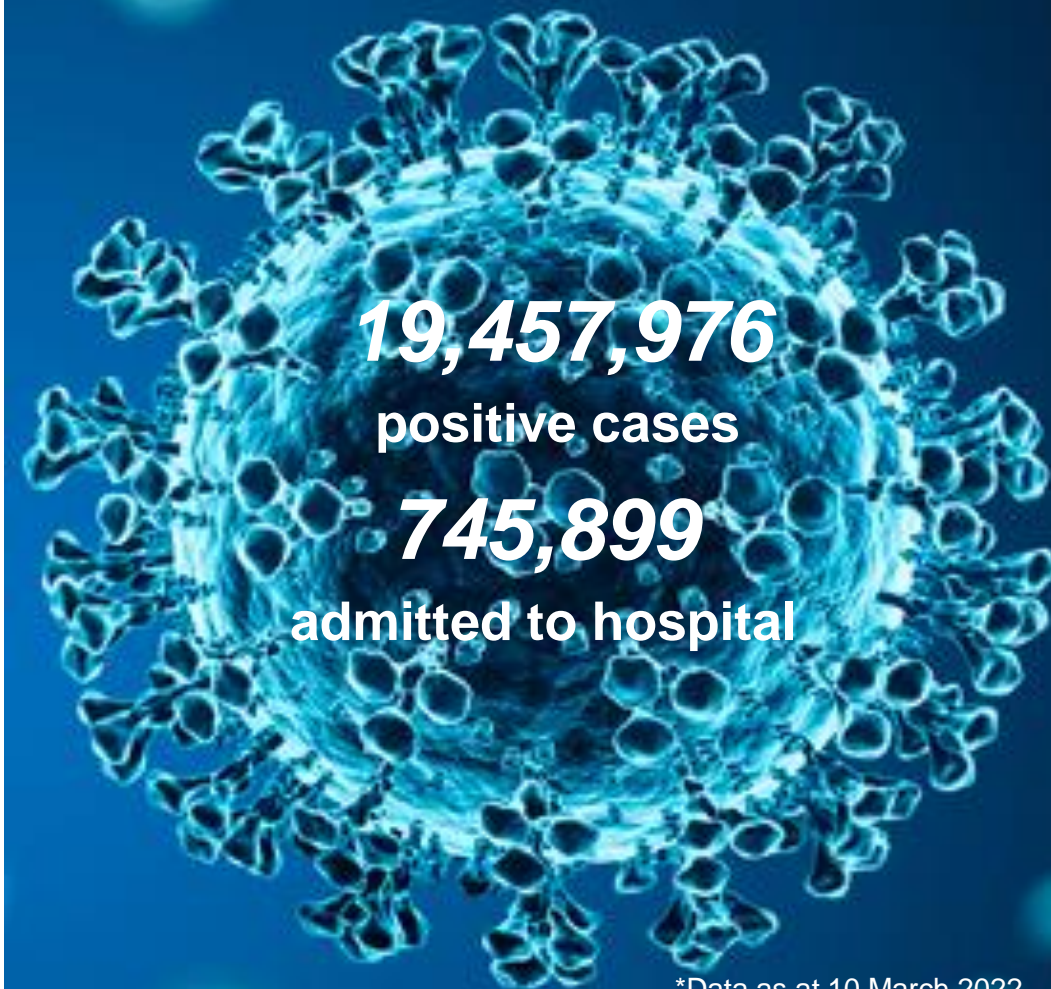

Inform: National policy decisions designed to keep people safe.

Undertake: Research to help understand about service demand and capacity.

Understand: Performance – focusing on population health outcomes.

Proactive: Increase health and care resources in emerging hot spots.

Ensure: Critical capacity is available to respond to peaks in demand.

*Data as at 10 March 2022

Delivering the largest and most complex vaccination programme in NHS history

Real-time national data tools have been the single most important advance on tackling inequitable uptake of the vaccination - Dr Bola Owolabi

140,275, 476
Vaccinations
administered

230,800*
hospitalisations
prevented

CORONAVIRUS: THANK YOU NHS HEROES
'The efforts of our volunteers help to save lives'

Harnessing the power of data and technology to recover against the elective backlog

- **Over 6 million** estimated on an elective waiting list
- **4 in 5 waiting for care** that do not require admission to hospital
- **Over 10 million patients** did not come forward for treatment during the pandemic
- The overall **size of the waiting list is likely to increase**, at a faster rate than demand can cover.

A smarter NHS fit for the future
