

# The role of an ICS in creating the space for joined up conversations around digital and data

Katherine Church – Chief Digital Officer

March 2022

# Healthy Neighbourhoods...our ICS vision

*Modern, safe care in the most appropriate setting for the citizen*

*All Health & Care professionals have access to relevant datasets enhancing clinical safety*

*Citizens are engaged and designing their own digital models of care*

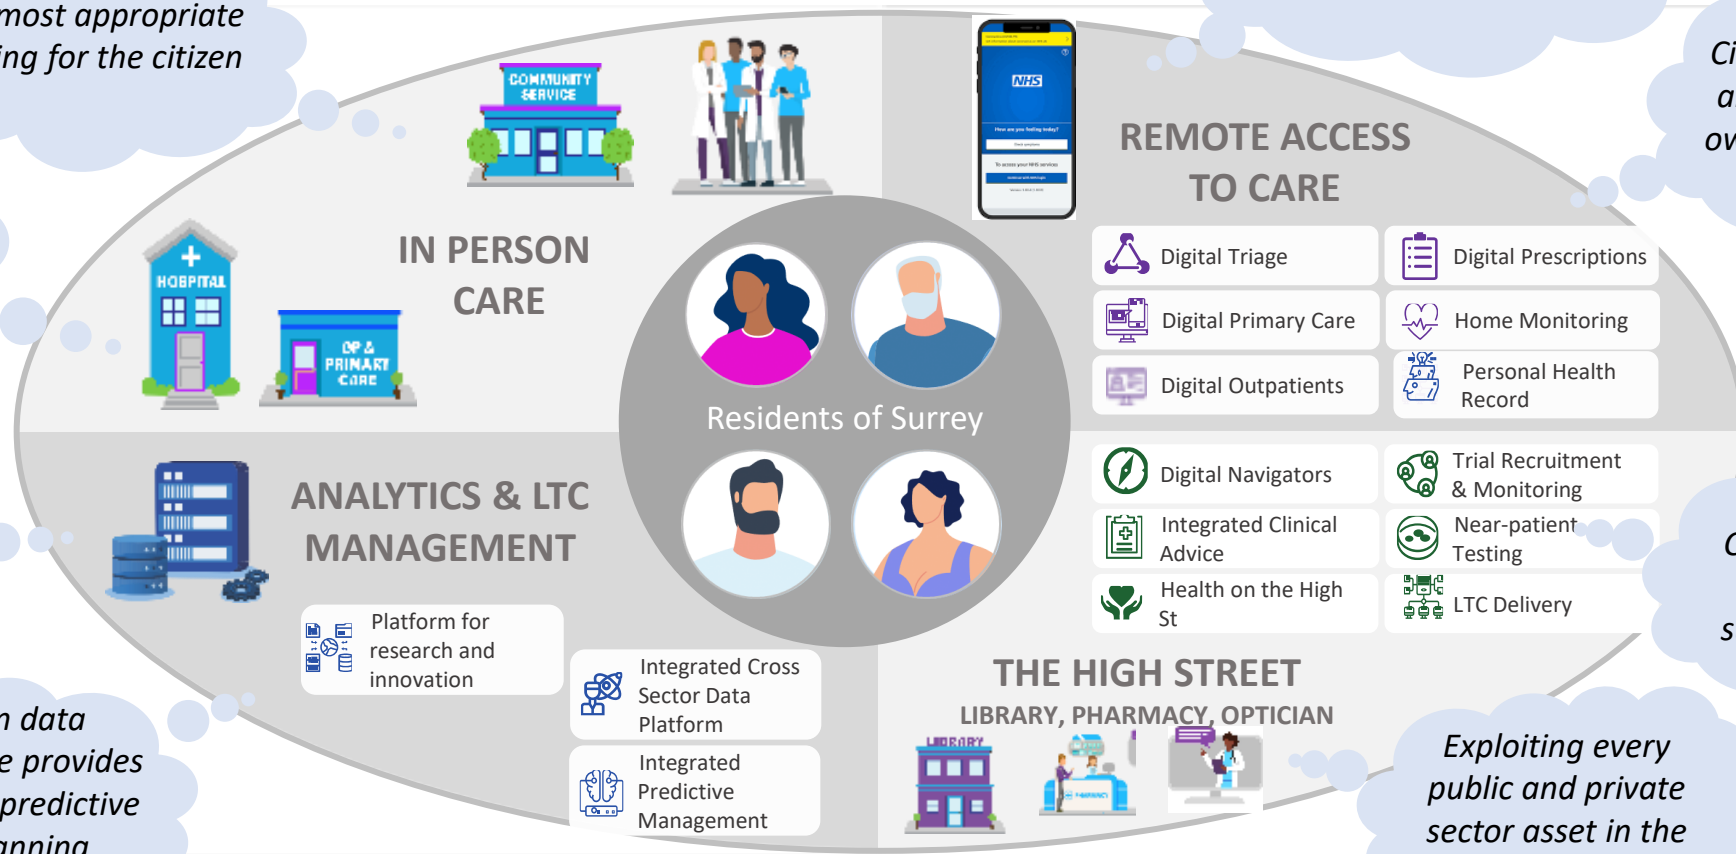

*Developing common infrastructure like diagnostics, EPRs and data sharing platforms*

*Citizens own their data and willingly contribute data to the cause*

*Modern data architecture provides a basis for predictive care planning*

*Exploiting every public and private sector asset in the community*

*Thriving Communities create their own self supporting solutions*

**...and a digitally confident and empowered workforce – ready to deliver the healthcare model of the future**

# What will the ICS ever do for us?

Creating the space for different kinds of conversations – with different people

- Outside in thinking – who are we actually designing for?
- Scale vs Place vs Provider – how do we design to our strengths?
- The huge potential of ICBs and ICPs
- WGLL, WPFW and 3 year digital investment roadmaps – bringing it all together in a coherent and cohesive plan
- Vendors and suppliers.....
- 42 loud voices – speaking as one with our partners and citizens – stronger together than alone
