

2022: Starting at home, a new integrated health and care service

Justene Ewing
Vice President Health and Care

How it started

YOUR NEW NATIONAL HEALTH SERVICE

On 5th July the new National Health Service starts

Anyone can use it—men, women and children. There are no age limits, and no fees to pay. You can use any part of it, or all of it, as you wish. Your right to use the National Health Service does not depend upon any weekly payments (the National Insurance contributions are mainly for cash benefits such as pensions, unemployment and sick pay).

 Carers: 7,000,000

Current pressures

Covid recovery

Workforce

Social determinants

Integrating health and care

Financial and operational sustainability

Personalised health and care

Culture, transformation and innovation

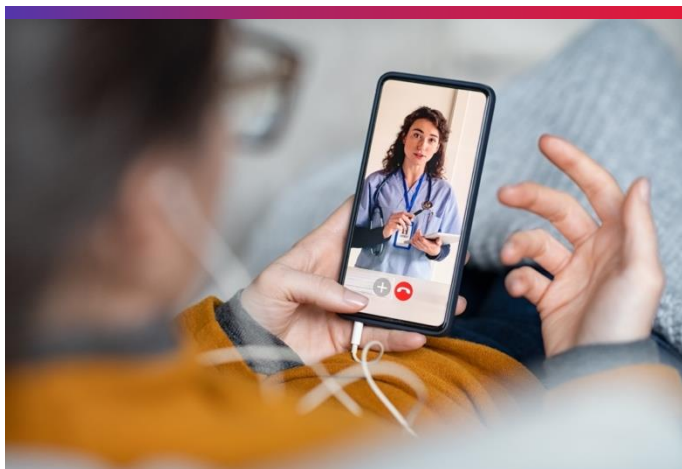

Statutory & policy

Things are changing

**Connected communities
are evolving**

**Digital health and care is
coming closer to home**

**Health and care professionals
are working closer together**

NHS England key priorities 2022/23

01

Accelerate plans to **grow the substantive workforce and work differently** as we keep our focus on the health, wellbeing and safety of our staff.

02

Use what we have learnt through the pandemic to rapidly and consistently **adopt new models of care** that exploit the full potential of digital technologies.

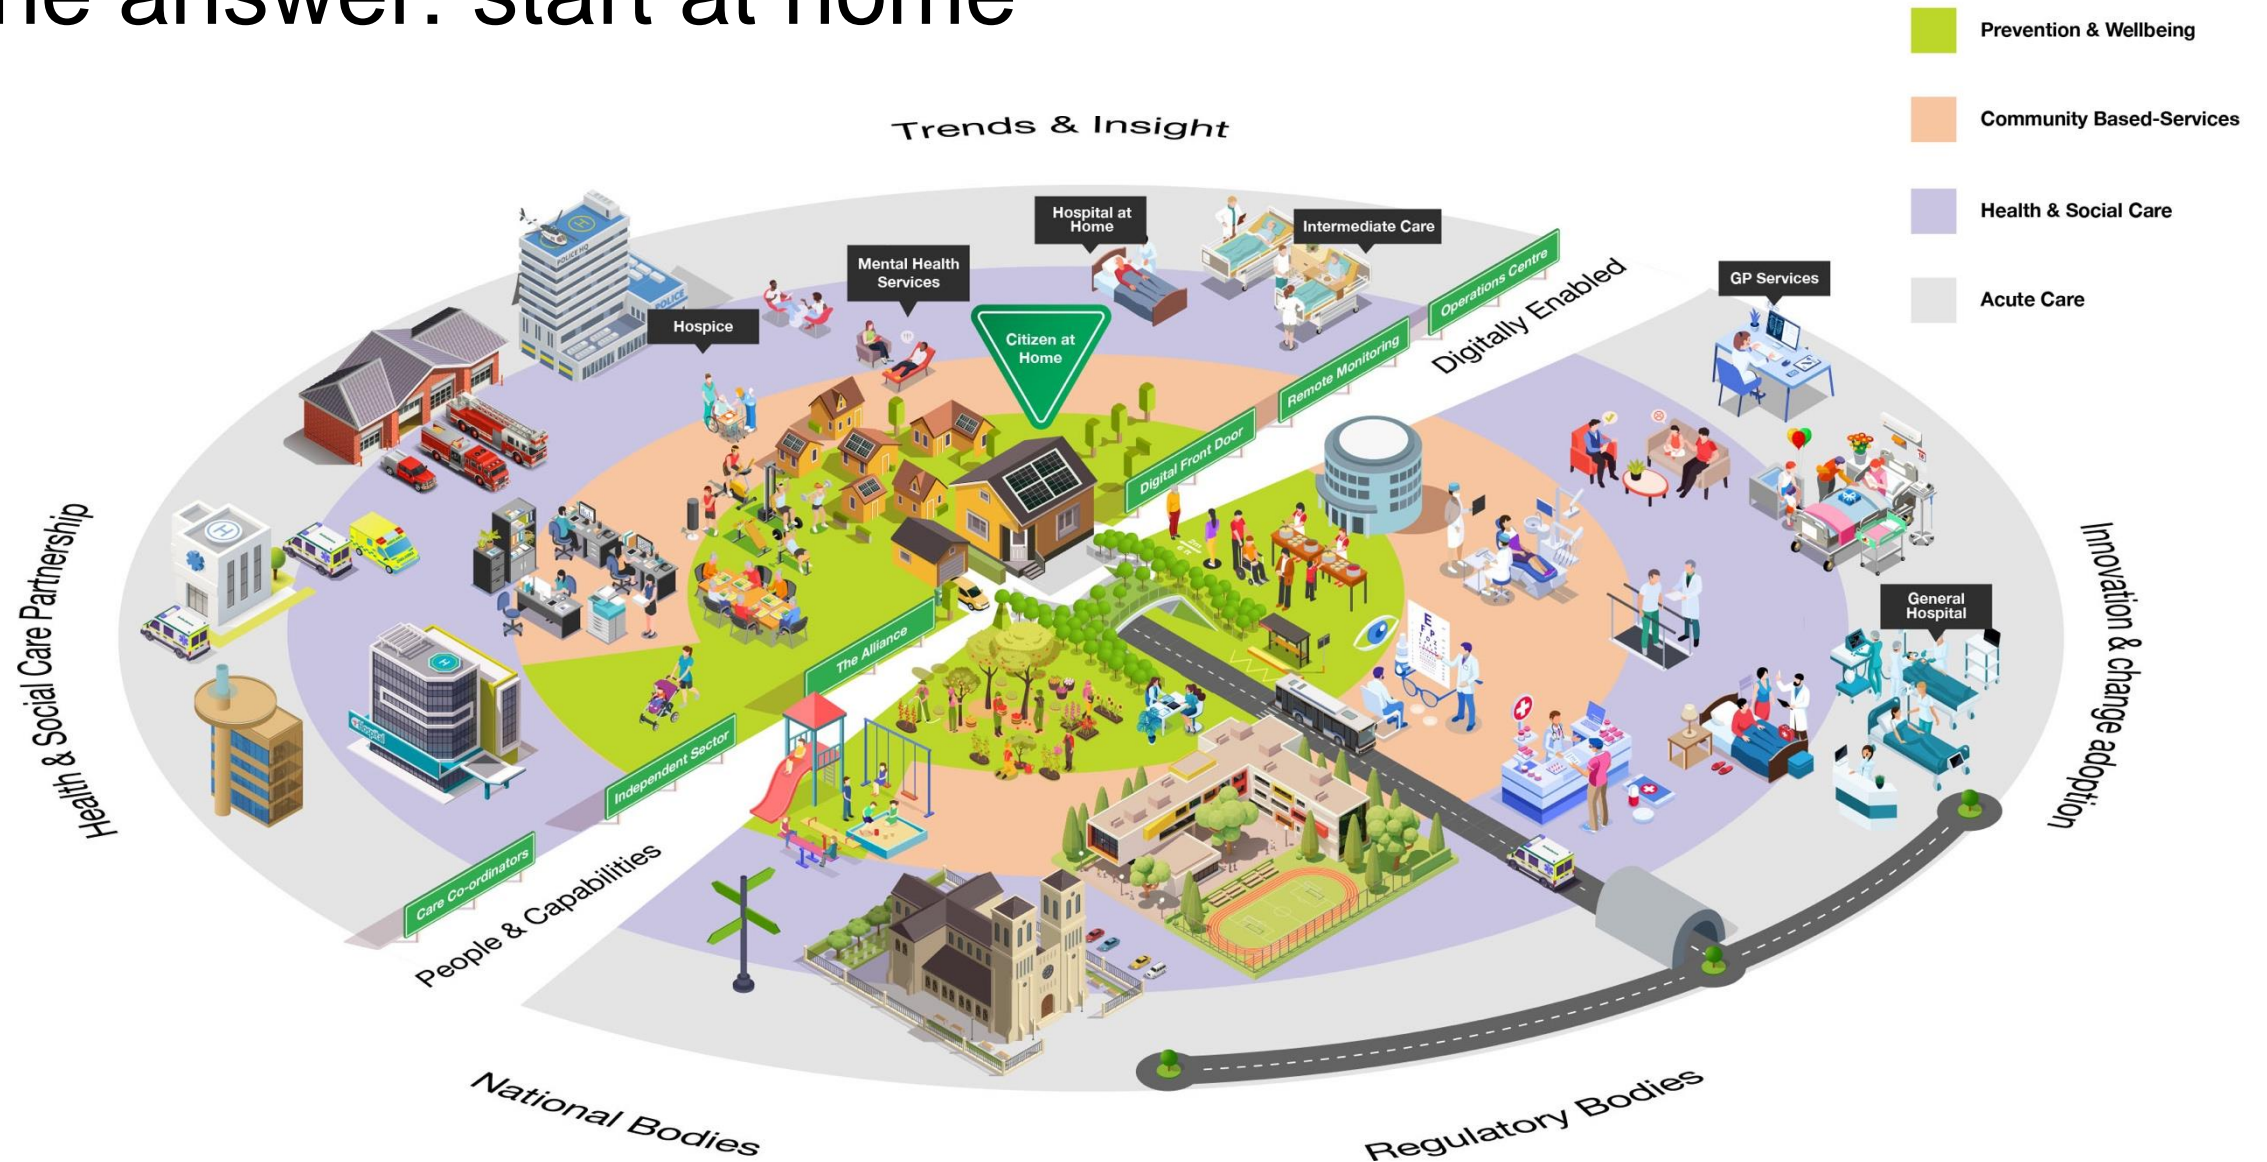

03

Work in partnership as systems to make the most effective use of the resources available to us across acute, community, primary and social care settings, to get above pre-pandemic levels of productivity as the context allows.

04

Use the additional funding government has made available to us to **increase our capacity and invest in our buildings and equipment** to support staff to deliver safe, effective and efficient care.

The answer: start at home

Putting the heart back into health and care

We deliver the insight, technology, services and integration that make people-centered health and care experiences possible.
