## Confidence

Using it to be able to predict health needs 6-12yrs ahead

Are we doing the right thing?

Assure Data that Improves Outcomes and Saves Lives

Quality?

Understanding it

Helping us to get it right first time!

Being able to understand what is needed

Choice

The people who provide care need feedback

Co-producing health care with patients

What matters to me?

Using data to help

Using technology to help

Building around the needs of users

Technology will have most of the care of its development

We all learn differently

Specialist Nurse Digital Coaches

Not about doing it for you but updating the workforce

We need a good course designed to the workforce to using technology

Don't assume young people are digitally literate!

making support generic for all

Processing Digital Information on a screen is much more complex & slower than people understand

Assure Data that Improves Outcomes and Saves Lives

Being able to access the right information

It needs to be an interoperable system that works across systems

Standardising digital records

Using it to understand changes

Who can understand an algorithm

Who are we not paid

Using it to understand changes

Who can understand an algorithm

Who are we not paid

Who can understand an algorithm

Who are we not paid

Who can understand an algorithm

Who are we not paid

Who can understand an algorithm

Who are we not paid

Who can understand an algorithm

Who are we not paid

Who can understand an algorithm

Who are we not paid

Who can understand an algorithm

Putting data through the filter

A live dashboard that is visible on the ward

Supporting daily practice

How can we use our information more with in the NHS system?

Supporting the public

Requires cross departmental collaboration
