# History of NHS App integration

Nottinghamshire wanted a single front door for patients. Requested PKB and NHSD to work together to integrate NHS App & PKB so patients could access all local data and tools via the NHS App

Nottingham went live in March 2020

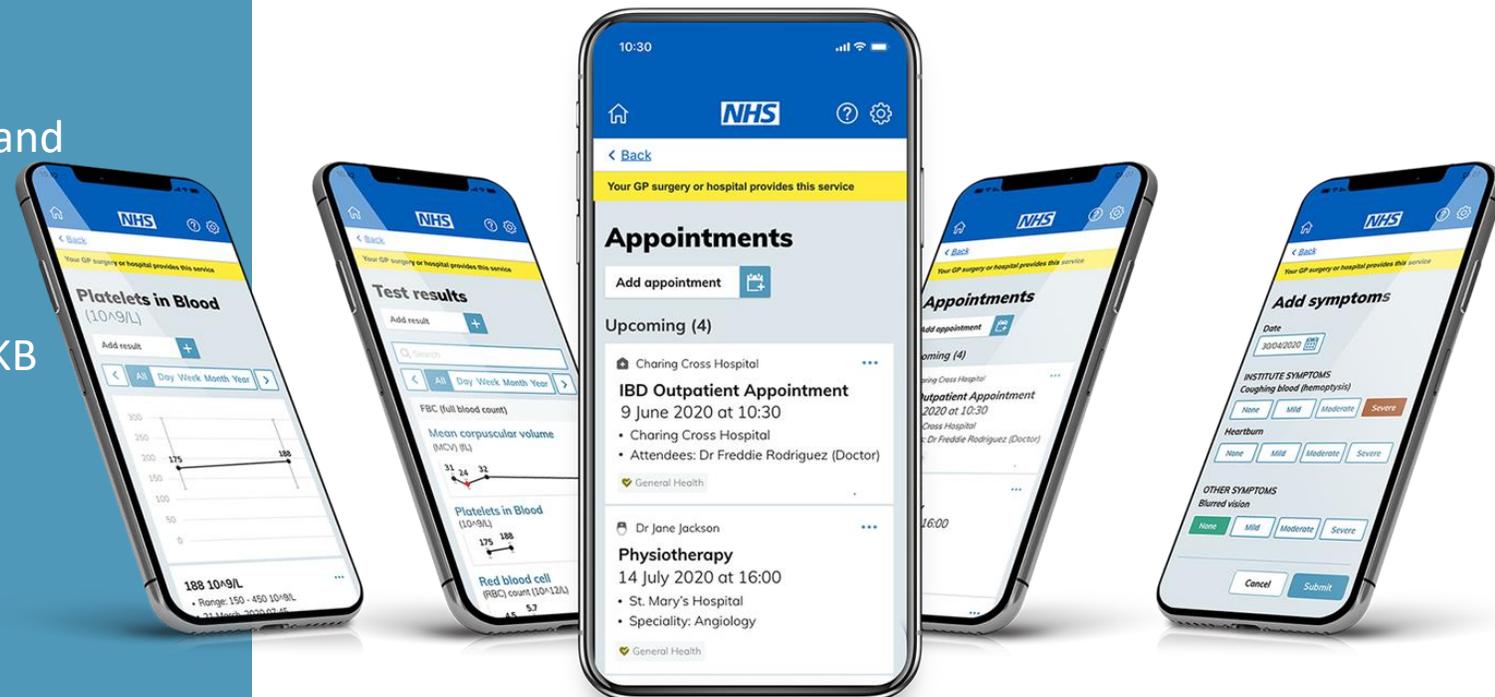

Follows by North West London, Cheshire East and Sussex in summer 2020.

During this time multiple more screens were included to give patients access to nearly all PKB screens

And now....

**NHS login single sign-on into PKB**

**NHS App user interface embeds PKB functionality**

# England regions PHR in NHS App

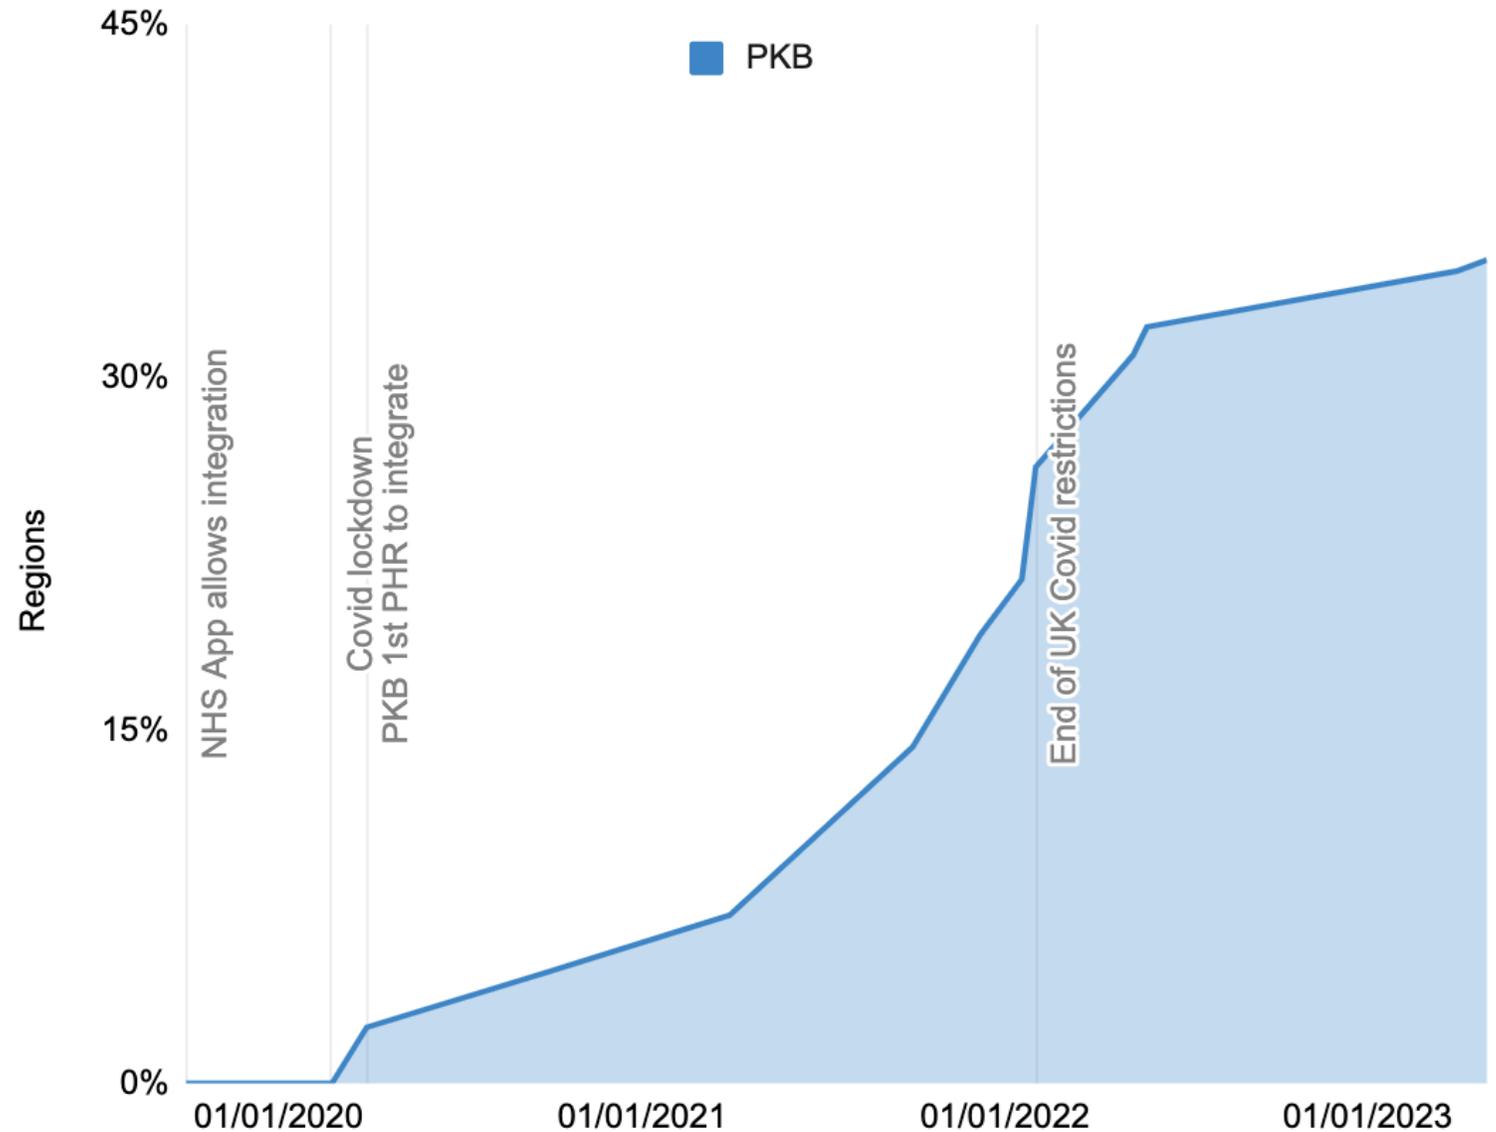

32% ICS today use PKB, with several more in progress expected to get to 36% coverage within the next few months

12 additional screens:

- Events and messages (letters, discharge summaries, clinic letters)
- Medications
- Test results
- Appointments
- Care plans
- Library of resources
- Symptom tracker
- Measurements
- Journal
- Imaging

More screens in discussion

## Regions with PKB switched on inside the NHS App

**What impact did this have?**

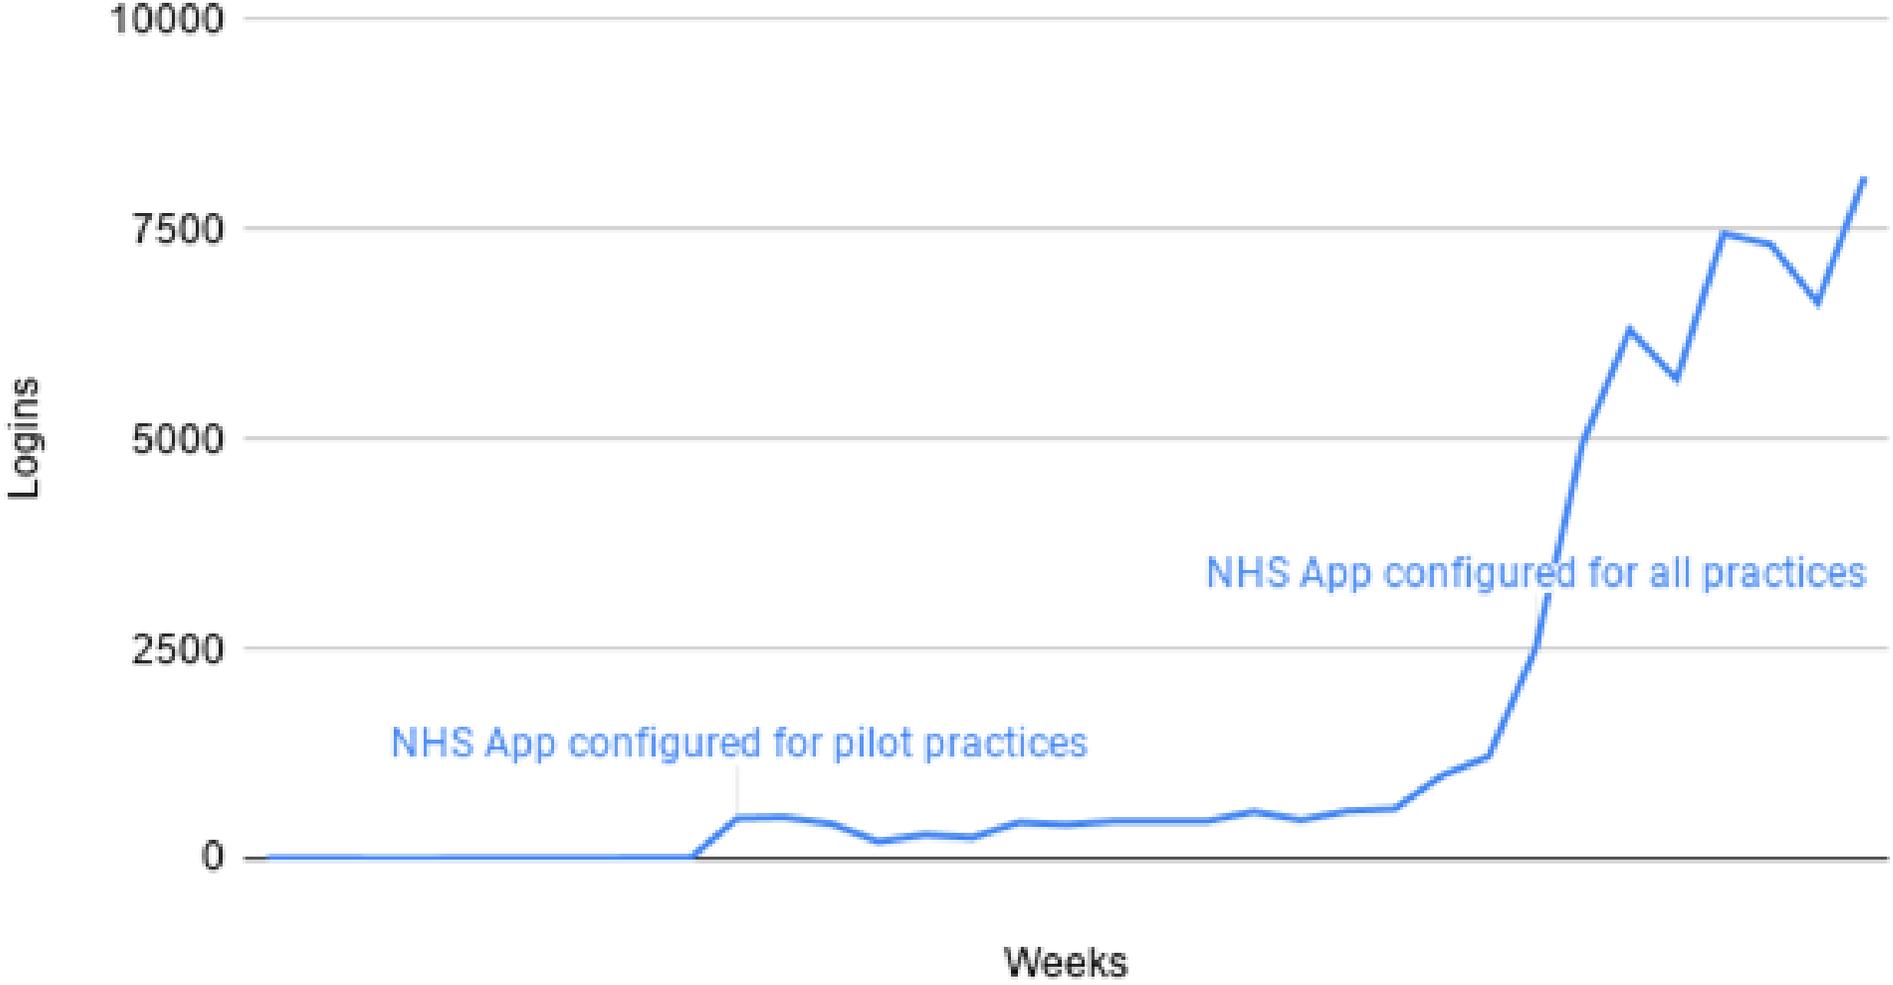

# Patients register using the NHS App

Registrations each day in Sussex after PKB switched on in NHS App

# Patients usage/login increases in NWL

# New customers start high with digital adoption

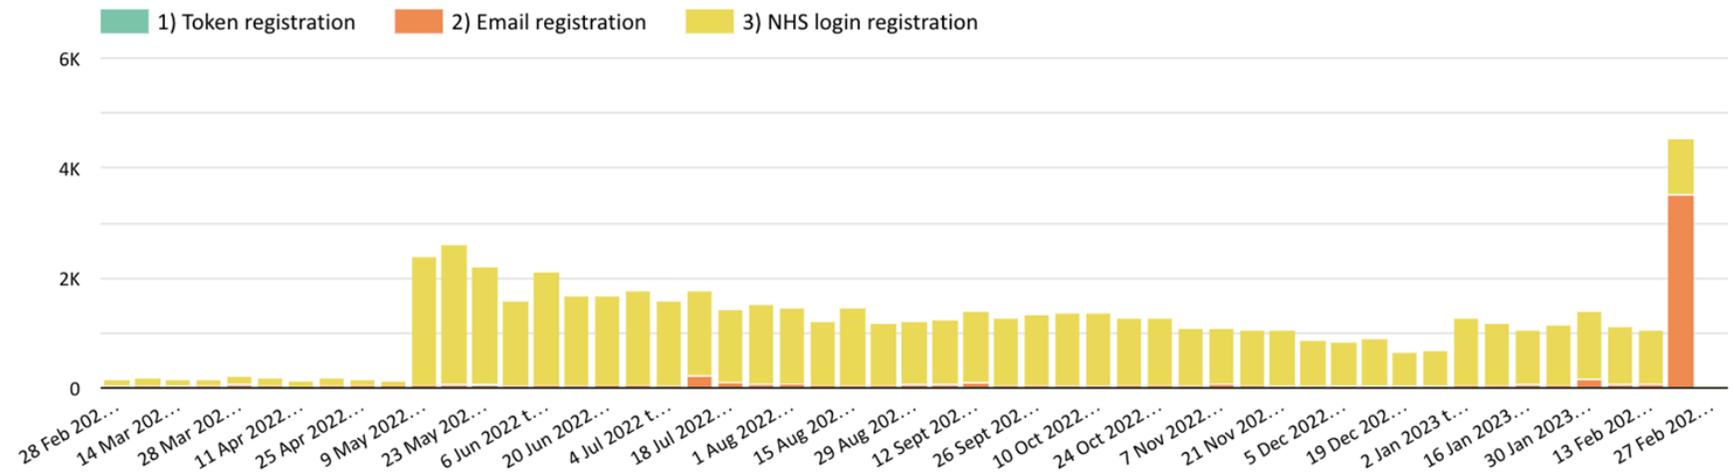

University Hospital of North Midlands:

Staffordshire switched on NHS App integration during their planning and mobilisation phase

During this 7 month period ahead of go live, with no comms to patients over 50,000 patients who are residents of staffordshire and under the care of UHNM registered for PKB via the NHS App using NHS login.

Now the hospital has started its digital transformation programme, it can immediately benefit from this shift.

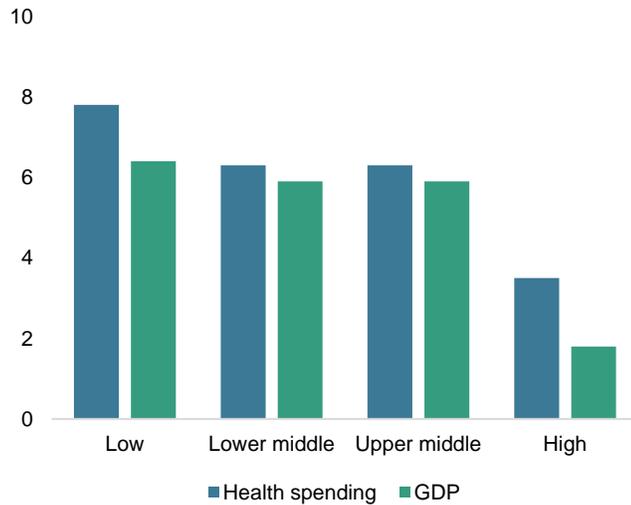

Registration per week

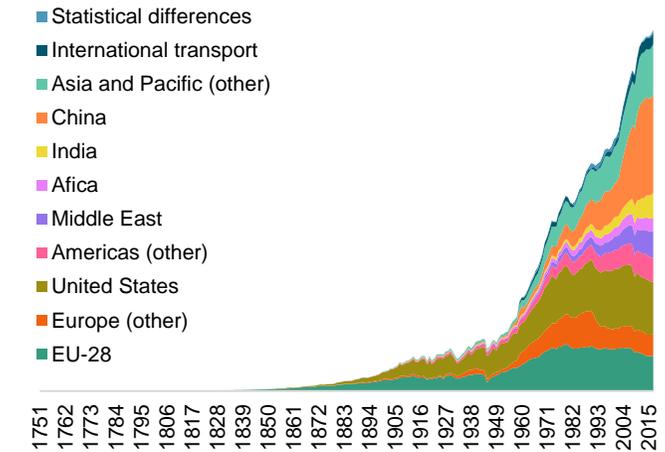

# Why does this matter? - Three Megatrends

Real growth by country income group, 2000–2017 (%)

Annual total CO<sub>2</sub> emissions, by world region, 1751 to 2017

Source: Carbon Dioxide Information Analysis Center (CDIAC); Global Carbon Project (GCP)  
 Note: The difference between the global estimate and the sum of national totals is labeled "Statistical differences".

## Health crisis

Spending growth > GDP growth

Source: WHO 2019, Global Spending on Health: A World in Transition

## Digital solution

Patients self-manage

Professionals lower costs and raise quality

## Climate crisis

CO<sub>2</sub> emissions high and dangerous

Source: Our World in data 2019

## Digital solution

Move data not patients

Prevent expensive treatments

## Covid-19 crisis

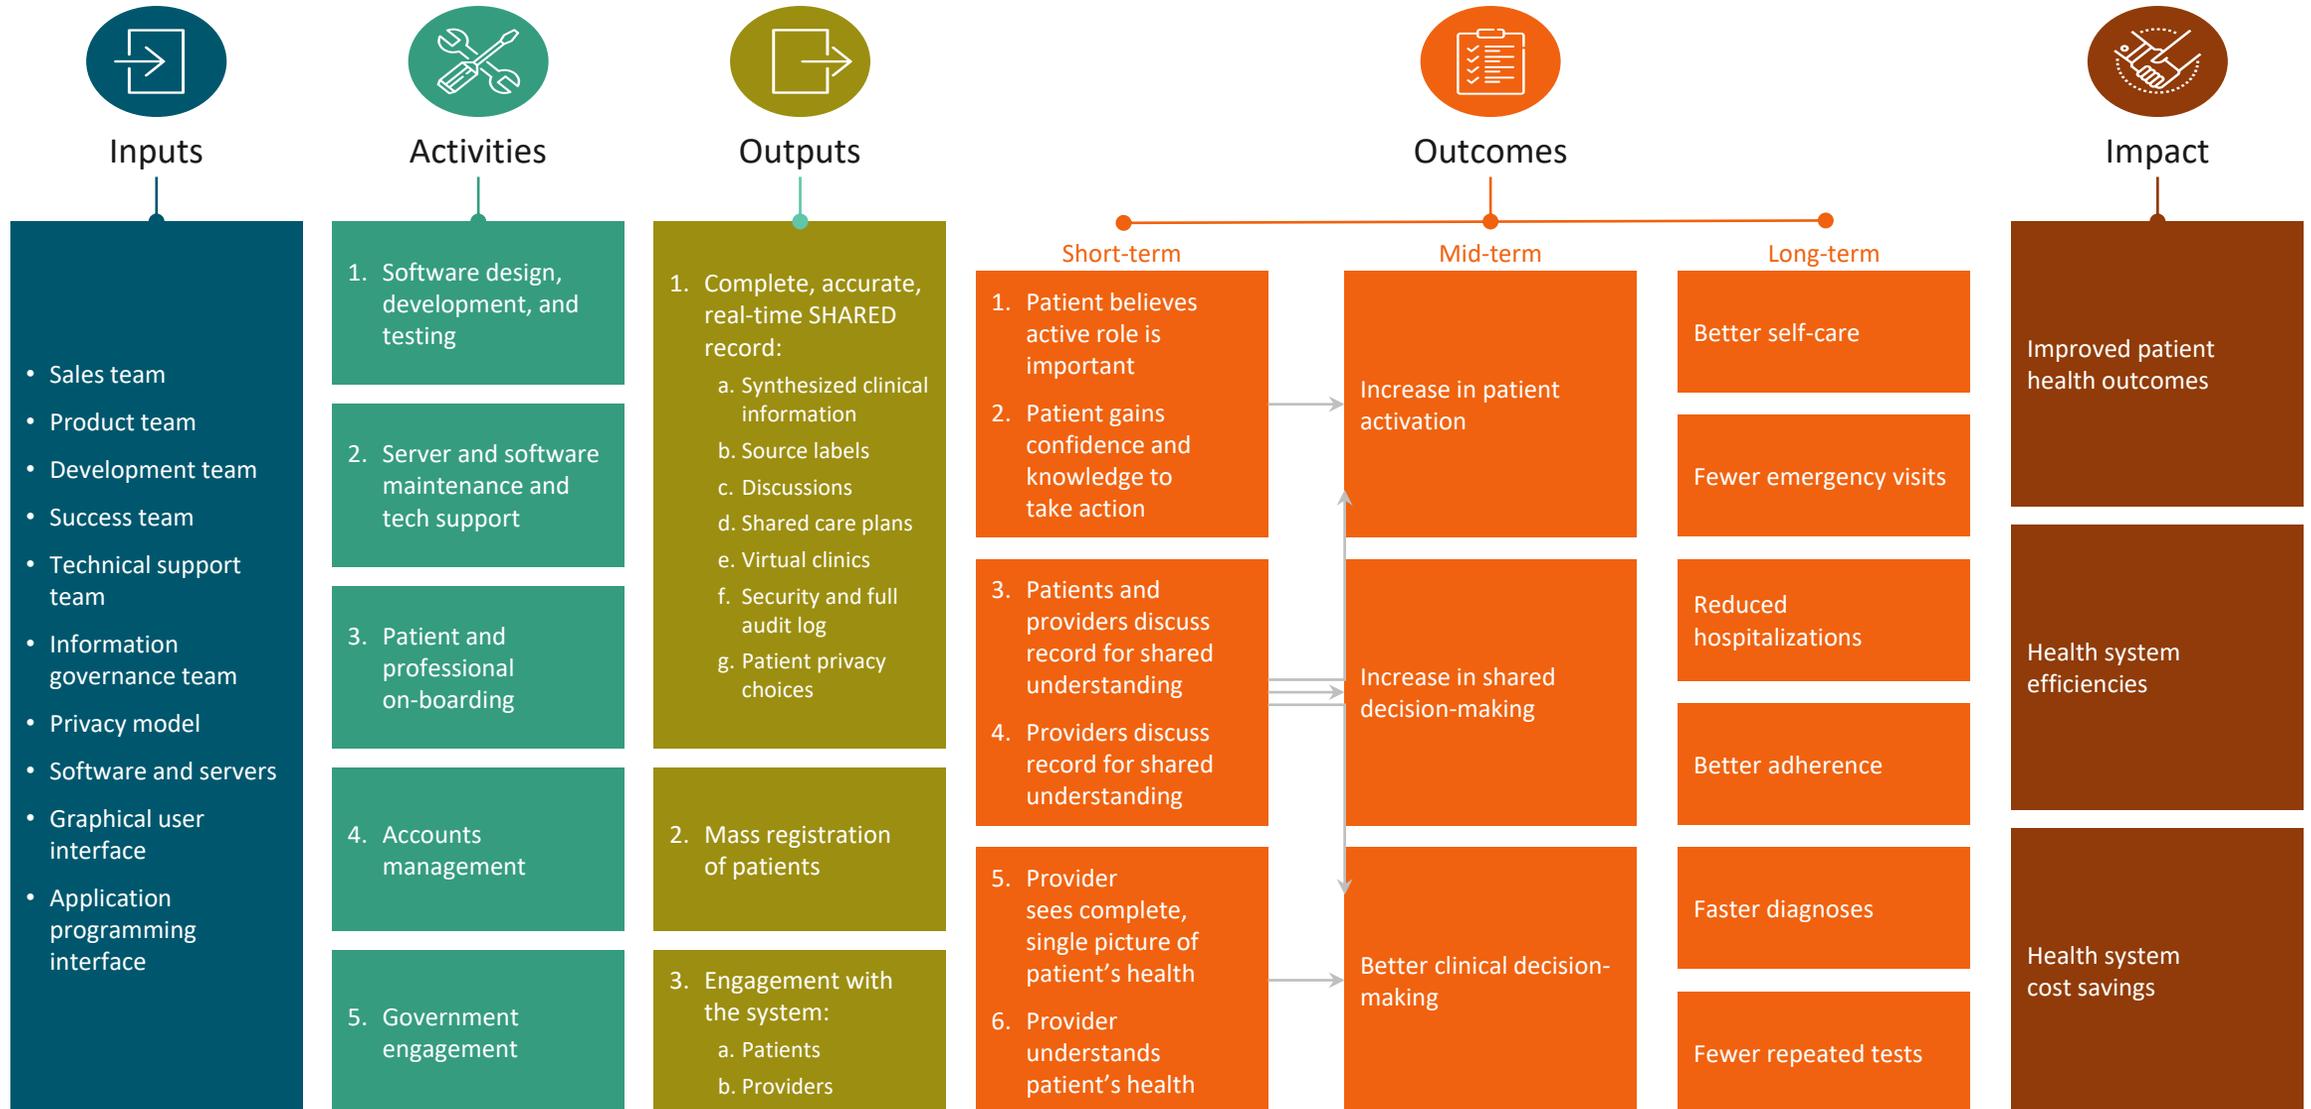

Backlog in service delivery/elective recovery

Restructure of service delivery needed

## Digital solution

Treatment from hospital without going to hospital

Relates back to health crisis

# Mass registration automates and scales activation and outcomes

## Automation

Mass registration through automated sending of letters to patients' homes

## Registration

25% of patients register within 30 days of receiving letter

## Outcome

Hospital stops spending £1-3 / per appointment on letters for these patients

## Activation

70% of letters read by patients within 48 hours (50% within 2 hours)

## Outcome

Hospital stops spending £100-150 / per appointment on follow-up with these patients

# Patients Know Best Saves Money and Improves Patient Outcomes

Symptom tracking, home devices, patient journal and other data collection means specialist helping patient can see full picture immediately about patient's health.

**Data from patient**

Test results, radiology reports, clinic letters, medication instructions, and care plan protocols allow patient to look after themselves at home.

**Data from provider**

Patient gets direct help from specialist team that knows patient and disease. Fast responses prevent disease progression and expensive intervention.

**Patient provider communication**

Cheaper medications safe to use through symptom tracking

Less clinical time through secure messaging

Fewer operations through less disease progression using care plans

# Climate Crisis

4.4% of the world's net CO<sub>2</sub> emissions are from health care

## Move data not patients

- Digitisation avoids carbon emissions
- Remote monitoring prevents need for carbon-intensive treatments e.g. surgery

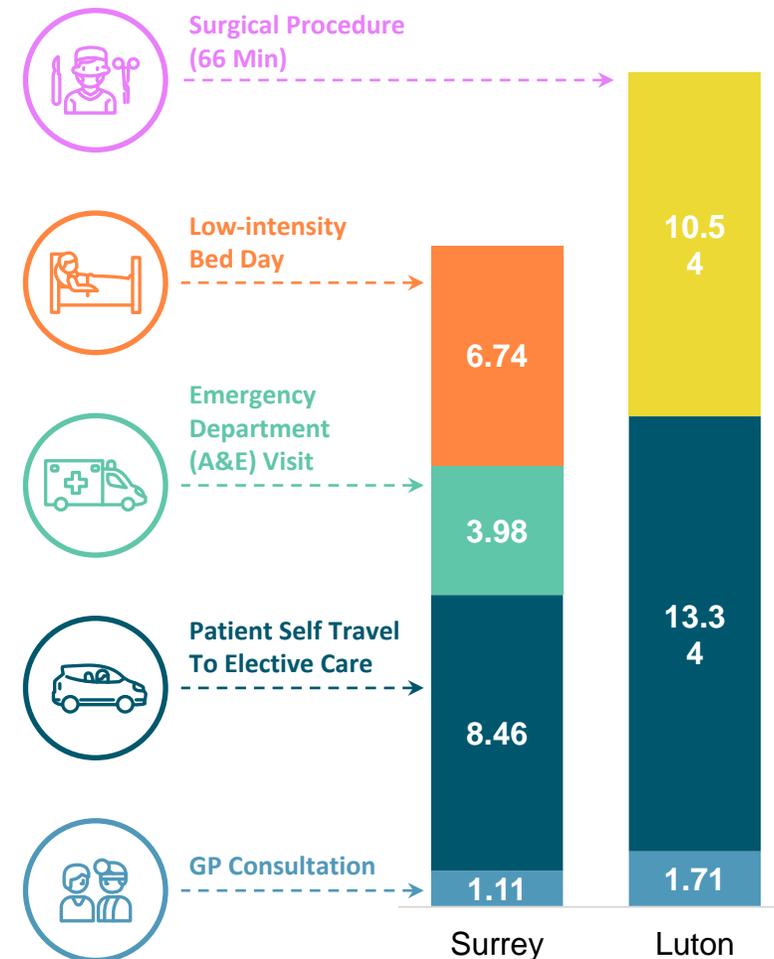

5.4%

of UK carbon emissions are from NHS

NHS responsible for **5 per cent** of all traffic on roads

KG CO<sub>2</sub> emissions avoided/Patient

# Enabling a wider digital ecosystem

- Not every single app, device and wearable can work with the NHS App

- Many partners sharing their data with patients in PKB as a longitudinal records

- PKB can enable this data being available for patients in the NHS App

More data and more partners easily able to be part of the digital ecosystem and channel shift.

# What's next...?

## New screens

- Continual expansion and adaptation of screens in the app based on user research and needs
- Results in sharing of more data, more easily, through a national front door

## More regions

- Giving increased data to more patients across more regions

## New nations!

- A lot of learning taken onboard by new nations, such as Wales to deliver a programme based on learnings and improvement
  
- PKB are looking forward to supporting the new nation on this journey, launching soon

Supporting transformation programmes = Increased outputs enhanced by digital at scale
