Digital Clinical Safety

Why everyone needs Digital Safety input

Patient Safety / Digital Safety

Technology is a powerful tool that is evolving the healthcare industry with the systems and devices used to care for patients. It provides staff with the knowledge of their patient with a few clicks of a keyboard, gives readings in seconds and transfers data from one system to another.

This digital aspect has given way to changing healthcare but not the mentality of having Digital and Patient Safety as separate entities

Moving forward

- Presence / teaching to all NHS workers
 - Interlinking Patient & Digital Safety
 - Daily huddles in service lines
 - Spreading awareness

NHS

Bedfordshire Hospitals
NHS Foundation Trust

Thank you
