UK Healthcare CISO

Focus on Healthcare Security with Armis

You Cannot Protect What You Cannot See

- **Visibility is Key:** Armis underscores the critical importance of comprehensive visibility across all assets and data sources in all sectors, particularly in healthcare, to ensure robust security.
- **Beyond the Surface:** With healthcare's vast attack surface, Armis's advanced asset management and intelligence capabilities enable organisations to identify and secure both known and unknown devices and systems.
- **Proactive Protection:** Emphasizing a proactive stance, Armis helps healthcare organisations navigate the challenges posed by the indiscriminate nature of cyber threats, ensuring a secure environment for patient data and healthcare services.

Detection & Remediation with Armis

Immediate Threat Detection

Within just 20 minutes of activation, Armis identified previously undetected network activity, pinpointing an active cyber threat

Swift and Effective Response

Following the threat detection, the organisation took decisive action, quickly disabling the compromised asset to prevent further unauthorised access

Impact on Patient Care

The cyber threat had a significant clinical impact, with over 400 healthcare staff losing their ability to provide direct patient care. This disruption highlights the profound consequences of cyber vulnerabilities on clinical operations and patient safety

Prevention & Future Readiness

Armis not only detects and responds to immediate threats but also plays a crucial role in prevention and future readiness. By continuously analysing and learning from network activity, Armis helps healthcare organisations anticipate potential vulnerabilities and fortify their defences

Thank you!
