

Embedding proactive care with Pathway

Mihad Mohamed
Product Director – Research & Life Sciences

NHS challenges

An aging population

Prevalence of long-term conditions

Soaring patient demand

Powerful insights to drive early interventions

Primary care data

Huge numbers of patients who could benefit from healthcare interventions can be found in primary care data.

Proactive healthcare delivery

Moving from reactive healthcare delivery to proactive, preventative care.

Primary care capacity

Identifying those who could benefit from medical intervention is a struggle with primary care teams already at capacity.

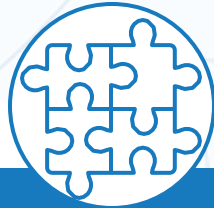

Pathway

Pathway process

Build module

Identify patients

Manage care

Pathway in action

Hepatitis C Elimination

- Pathway implemented as part of NHS England's Hepatitis C (HCV) Elimination Programme.
- Enabled care teams to identify potentially at-risk patients for review, testing and treatment.
- Four GP practices took part in the initial pilot programme, serving a patient list of around 24k.
- Patients have subsequently started treatment as a direct result of this pilot, that would not have been picked up from other Hepatitis C screening services.

Hepatitis C Elimination

” Tools like Pathway show that there is a new way to work with primary care. We’re no longer waiting for GPs to refer into us - we’re actively going out, finding those patients in primary care, and bringing them to us.”

David Byrne
ODN Manager
Cheshire & Merseyside Operational Delivery Network

Future opportunities for Pathway

Risk factors in primary care

Scaling up of local initiatives
